INTRODUCTION

The Montana Highway Commission is directly responsible for the construction and maintenance of approximately 5,800 miles of highways on the Primary System. It is also responsible for the construction of about 4,900 miles of road now on the Secondary System.

In order to determine design standards and construction priorities for this large network of highways, it is necessary to obtain information on the extent that each section of highway is used. These required data are obtained and kept current by taking various types of traffic counts at approximately 2,000 locations throughout the State each year. These counts are converted to average daily traffic figures which have been used in compiling this report.

This year, for the first time, the entire Traffic by Sections report has been punched and tabulated on duplimats ready for printing by International Business Machines methods. This process has resulted in a considerable savings in time and will allow various summaries to be made by machine that were not practicable by hand tabulation. Rural route totals on the secondary system have been indicated by an asterisk following the totals for each route.
